

National Park Visitor Analysis

Professional Responsibility:

This involves safeguarding for their ecological integrity and recreational value. This also includes implementing scientific research and public awareness.

Promotion of Human Values:

To promote this, visitors need to foster a deep appreciation for nature and cultural heritage. And some additional components to this would be through educational programs and guided tours. To create a meaningful experience, national parks need to advocate for their natural wonders.

Fairness and Non-Discrimination:

This ensures that all visitors take in and are able to experience equal treatment, accessibility and respect for their diversity. This means that all visitors regardless of their background or identity have equal opportunities to enjoy their experience. It's important to foster an environment with respect and fairness.

Human Control of Technology:

This involves the thoughtful and responsible management of technological systems to enhance visitor's experiences, park operations and resources.

Transparency and Explainability:

The script processes data by renaming columns, joining datasets, and filtering.

Privacy: The script manipulates national park data, which is unlikely to involve direct privacy concerns.

Accountability: The script sources data from a CSV file and an online JSON.

Safety and Security: The script does not address safety and security directly.
